The New Rocketbook Fusion

By Martha Chetcuti and Cailan Apap
Senior 1

The new Rocketbook Fusion is an endlessly reusable smart notebook. It combines the traditional handwriting experience without the notepaper guilt! Rocketbook products can be reused, so you can stop using your other paper notebooks and save trees. When paired with Pilot FriXion ink, the pages of your Core can be wiped clean with water and a cloth! You could then scan and send your handwritten notes to your favourite cloud services using the Rocketbook app. This notebook includes one friction pen; the Fusion pen; which is a reusable pen to be used when writing on your Rocketbook Fusion reusable notebook. The Rocketbook Fusion costs €42.95 from the official website:

<https://myrocketbook.eu/collections/bestsellers/products/rocketbook-fusion?variant=38155898093749>.

So now it is your choice. Will you help save the environment by buying the Rocket Book, or will you continue destroying trees by using foolscaps? It is up to you.

Reusable Bags

By Elisa Lombardi
Senior 2

Should I use a plastic bag? ... nahhhh, it's just bound to tear! Unfortunately, you can't put too much weight in it as otherwise, it would rip and its components would fall apart. As a result, you would need to pick everything up from the floor. Why don't you use a reusable bag instead of a plastic bag? They **look good**, are *stronger and more durable*, whilst also being able to carry more items. What is more, reusable bags are **inexpensive** and they are *NOT HARMFUL TO THE ENVIRONMENT* as we do not need to dispose of them.

WHICH?

Reusable Lunchboxes & Bottles

by Nina Gatt
Senior 1

Are single-use plastic bottles or lunches in paper bags good?

NO! These items are extremely harmful for the environment and they are not very practical. Reusable bottles are practical because you can use them for a long time and they remain in excellent condition. Another bonus is that some metal bottles can keep your drinks hot/cold for up to 10 hours. Reusable lunch boxes are ideal as they can be washed easily, and it is easier to carry food in them as it won't get squashed in your bag. The most sustainable reason to buy these items is that they are good for the environment. About 8-9 metric tons of plastic bottles end up in our oceans every year, which is equivalent to one full garbage truck per minute!

*"Plant less plastic,
plant more
trees!"*

Lunch at school

*by Kaitlyn Sciberras Buhagiar and Ella Greenaway
Senior 2*

It is evident that during breaktime some students are wrapping their bread, wraps and more food in foil or plastic. To prevent this problem of wasting plastic and foil, we could simply buy a handy lunch box to store our food in there instead of wrapping it.

Moreover, instead of making use of single-use plastics such as a plastic water bottle, we could easily buy a reusable water bottle. If you like to drink your beverages with straws, we recommend using metal ones!
